

Import Data Using Transform Maps in Spread Sheets

Ideation Phase

Brainstorm & Idea Prioritization Template

Date: 30 September 2026

Team ID: Msu207Team4

Project Name: Import Data using Transform Maps in Sheets

Maximum Marks: 4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming helps the team to generate different ideas for importing and managing data efficiently. The team discusses the problems faced while transferring data from Sheets into the system and identifies suitable solutions. Different ideas are collected, grouped and prioritized based on simplicity, accuracy, time saving and ease of implementation.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team members discuss the difficulties involved in importing data from Sheets into the system. The main problem identified is that manual data entry is time-consuming and may lead to errors and duplicate records.

Problem Statement:

“To develop an efficient method to import data from Sheets into the system using Transform Maps, while maintaining data accuracy and reducing manual data entry.”

Step-2: Brainstorm, Idea Listing and Grouping

The team brainstorms different ideas to solve the identified problem.

Ideas Identified:

- 1. Import data directly from Sheets into the system.**
- 2. Use Transform Maps to map source fields with target fields.**
- 3. Validate the imported data before processing.**

4. **Identify and avoid duplicate records.**
5. **Use field mapping to place data in the correct columns.**
6. **Handle incorrect or missing data during transformation.**
7. **Test the import process with sample data before importing the complete dataset.**

Idea Grouping:

- **Data Import: Import data from Sheets into the system.**
- **Data Mapping: Map spreadsheet columns to the correct target fields.**
- **Data Validation: Check missing, incorrect and duplicate data.**
- **Data Transformation: Convert the source data into the required format.**
- **Testing: Test the Transform Map using sample records before final import.**

Prioritized Idea:

The team selects using Transform Maps for data mapping and transformation as the main idea because it helps automate the import process, reduces manual work and improves data accuracy.
