Project Name: Import Data Using Transform Maps in Sheets

Maximum Marks: 2 Marks

Empathy Map Canvas

An empathy map is a simple tool used to understand the users, their needs, problems, thoughts and experiences. It helps the team look at the problem from the user's point of view.

For the Import Data Using Transform Maps in Sheets project, the empathy map helps us understand the difficulties users face while importing data from Sheets into the system. It focuses on reducing manual work, avoiding errors and making the data import process easier and faster.

Empathy Map

Says		Thinks	
"I want to import data quickly."		"How can I reduce manual data entry?"	
"I don't want to enter every record manually."		"Will the data be mapped to the correct fields?"	
"The imported data should be accurate."		"What happens if some data is missing or incorrect?"	
"I need an easy way to upload my Sheet data."		"I want to avoid duplicate records."	
Does		Feels	
Prepares data in Sheets before importing.		Frustrated when manual entry takes more time.	
Uploads the data into the system.		Worried about incorrect data.	

Maps the source fields with target fields.	Confused when field names or formats are different.
Checks the imported records for errors.	Satisfied when the data is imported correctly.

User Needs

- 1. The user needs a simple method to import data from Sheets.**
- 2. The user needs correct mapping between source and target fields.**
- 3. The user needs to reduce manual data entry.**
- 4. The user needs to identify missing or incorrect data.**
- 5. The user needs to avoid duplicate records during import.**
- 6. The user needs a faster and more accurate data import process.**
- 7. The user needs an easy-to-understand Transform Map process.**

User Problems

- 1. Manual data entry takes more time.**
- 2. Large amounts of data are difficult to enter manually.**
- 3. Incorrect field mapping can cause errors.**
- 4. Missing values can affect the quality of imported data.**
- 5. Duplicate records may be created during the import process.**
- 6. Different data formats can make the transformation process difficult.**

Main Insight

The users need an easy, fast and accurate way to import data from Sheets. Using Transform Maps can help users map the source fields to the correct target fields, transform the data into the required format and reduce manual work.
